

### NLRMP - Amreli District

**Scanpoint Geomatics Ltd. has been awarded Twelve Crores Rupees of contract for Land Resurvey of Amreli District, Gujarat under the NLRMP Programme recently. The total area to be resurveyed is more than 6800 sq. km. There are 11 Taluka's and 631 villages in Amreli.**

The contract entails resurvey of each and every land parcel using ETS/DGPS survey equipment. At present, we have deployed more than 50 Trimble R4 DGPS machines. The project is already started by SGL and some taluka jobs is already completed.

**Iconic Point Developed at the Collector's Office, Amreli**

The National Land Records Modernization Programme (NLRMP) is launched by Government of India in August 2008, aimed to modernize management of land records, minimize scope of land/property disputes, enhance transparency in the land records maintenance system, and facilitate moving eventually towards guaranteed conclusive titles to immovable properties in the country. The major components of the programme are computerization of all land records including mutations, digitization of maps and integration of textual and spatial data, survey/re-survey and updation of all survey and settlement records including creation of original cadastral records wherever necessary, computerization of registration and its integration with the land records maintenance system, development of core Geospatial Information System (GIS) and capacity building.

The main objective of the NLRMP is to develop a modern, comprehensive and transparent land records management system in the country with the aim to implement the conclusive land-titling system with title guarantee, which will be based on four basic principles, i.e., (i) a single window to handle land records (including the maintenance and updating of textual records, maps, survey and settlement operations and registration of immovable property), (ii) the —mirror || principle, which refers to the fact that cadastral records mirror the ground reality, (iii) the —curtain || principle which indicates that the record of title is a true depiction of the ownership status, mutation is automated and automatic following registration and the reference to past records is not necessary, and (iv) title insurance, which guarantees the title for its correctness and indemnifies the title holder against loss arising on account of any defect therein.

SGL has developed a especial software solution for NLRMP and is being used for NLRMP-Gujarat.
